

Heraklith® | Solid Battle Plug

Heraklith® | Solid battle plug (SBP) is specifically suited for the mounting of wood wool cement panels. The battle plug makes mounting simple, quick and efficient. The exceptionally high extraction value combined with a low anchoring depth ensure reliable and long-lasting mounting. The covering caps have an attractive, flat and fine wood wool structure for a decorative finish and are available in the most popular colours. In addition, the caps can also be painted over in all RAL colours.

Advantages

- Quick hammer set installation
- Simple installation: pre-drill and secure.
- Minimal anchorage depth
- Covering caps with wood fibre structure for decorative finish

Application range

Suitable for mounting wood wool cement boards to concrete ceilings and walls for internal and external use (no direct weathering), for example: parking garages, bottom of balconies, technical areas and basements.

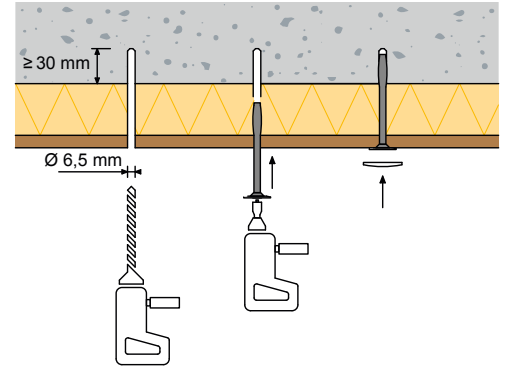

Solid battle plugs can be used in reinforced or normal concrete with strength class C20/25 in cracked or uncracked concrete. The required number of plugs and positioning depends on the size and type of panel (see the processing instructions on www.heraklith.co.uk).

Solid battle plug

Technical specifications

Corrosion category	C2
Tensile strength concrete C20/25	0.5 kN
Plug diameter	7 mm
Ring diameter	30 mm
Covering cap diameter	33 mm
Drilled hole diameter	6 - 6.5 mm
Drilled hole depth	30 mm
Anchoring depth in concrete	25 mm
Plug drive	Assembly attachment
Recommended anchoring material	Concrete
